

Arman Thakur

Full Stack Developer & Web Engineer

Mohali, Punjab / Himachal Pradesh, India | +91-9529425991 | armanthakur200814@gmail.com

[armandev.space](#) | [github.com/kaihere14](#) | [LinkedIn](#) | Twitter: @armankiyotaka | Instagram: @_mirenox

PROFILE SUMMARY

Arman Thakur is a first-year Computer Science student at Amity University Mohali and a self-driven Full Stack Developer with production-level experience shipping real-world applications. He builds across the complete web stack — React/Next.js on the frontend, Node.js/Express on the backend, and MongoDB/PostgreSQL/Redis for data storage — with a strong emphasis on clean architecture, performance, and developer experience. He has deep interest in distributed systems, AI-powered automation, authentication infrastructure, and open-source ecosystems. He is currently building DaemonDoc, contributing to the Nostr/Bitcoin Shopstr ecosystem, and learning RAG pipeline architecture with vector databases.

AT A GLANCE

8+ Projects Shipped	2,217 GitHub Contributions (2025)	1,958+ Commits
12+ Technologies	Top 18 Global — HackFest 2025	Current: Building DaemonDoc
Oracle AI Certified (x2)	SoB 2026 Secondary Shortlist	Open to Freelance & Collabs

EDUCATION

Bachelor of Engineering in Computer Science

Amity University, Mohali, Punjab | August 2025 – Present

- Relevant coursework: Data Structures & Algorithms, Full Stack Web Development, Object-Oriented Programming
- Actively ships production projects and freelance work alongside academic studies
- Applied to Summer of Bitcoin 2026 — placed on secondary shortlist for Shopstr MCP Server
- Participating in hackathons and open-source programs during first year

EXPERIENCE

Freelance Full Stack Developer

Self-Employed — Remote | February 2026 – Present

- Built **Mathlyst** — a full-stack booking platform for a Dubai-based mathematics tutor (Grades 4–8)
 - Integrated payment gateway for session bookings
 - Implemented Google Sheets backend to manage and store per-client booking data
 - Complete production deployment: custom domain, responsive UI, backend API
 - Tech: JavaScript, Node.js, Express, Google Sheets API, HTML/CSS, Payment Gateway

Open Source Contributor — Shopstr (Nostr/Bitcoin)

Summer of Bitcoin 2026 Applicant | February 2026 – Present

- Contributed to Shopstr — a decentralized Nostr-based marketplace for digital goods
- 7 merged pull requests including a Fisher-Yates shuffle fix and a multi-file loading spinner bug trace

- Ran a Zustand performance pilot on ProductContext — benchmarked against Jotai (tested by Ar3s and Mahi Raj)
- Used React DevTools Profiler — dramatic reduction in worst-case commit times
- Total render count decreased modestly due to remaining Context API usage in other providers
- Shared before/after profiler JSON files with the Shopstr team
- Submitted full MCP Server proposal: tool definitions (listListings, getProduct, getSeller), safety model, architecture diagrams, timeline
- Completed SoB competency test — Node.js script to fetch and parse Nostr kind 30402 events from public relays using Shopstr utilities
- Key contacts: calvadev (project owner), Gautam (mentor, former SoB contributor)
- Secondary shortlisted — capacity constraint at SoB org level, not a merit issue; calvadev open to bounty-based contributions

PROJECTS

DaemonDoc — AI-Powered README Automation

daemondoc.online | github.com/kaihere14/daemondoc | Complexity Rank: #1 | 10 GitHub Stars

- Webhook-driven backend pipeline that auto-generates and commits GitHub READMEs by analysing repo structure, dependencies, and source files using Groq-hosted LLaMA models
- Architected Redis + BullMQ async worker system with HMAC-SHA256 webhook verification and AES-256-GCM token encryption
- 40+ users, 48+ repos connected, 500+ automated README generations, 82% success rate
- Working on a landing page with interactive Duolingo-style onboarding animation simulating: git push → webhook → README generation flow
- Tech: JavaScript, Node.js, Express, MongoDB, Redis, BullMQ, GitHub OAuth, Groq AI, JWT

NovaDrive — AI-Powered Cloud Storage

novadrive.space | github.com/kaihere14/Nova_Drive | Complexity Rank: #2

- Chunked 5MB file uploads via presigned URLs to Cloudflare R2 with SHA-256 deduplication and hierarchical folder management
- BullMQ + Redis backend pipeline integrating Google Gemini AI for async file tagging and summarization
- Tech: React.js, JavaScript, TypeScript, Node.js, MongoDB, Redis, BullMQ, Cloudflare R2, Gemini AI

Clura — Self-Hosted Open Source Auth Provider

clura.armandev.space | github.com/kaihere14/clura | Built in a single day under deadline

- Self-hosted alternative to Clerk and Auth0 — developers register apps, redirect users to Clura's hosted login, receive RS256-signed JWTs back
- Issues ID token, access token, and rotating refresh token — all verifiable via public JWKS endpoint, zero SDK required
- Full three-service architecture with RSA key pairs and five-table DB schema
- Tech: Next.js, TypeScript, Express, Bun, PostgreSQL, Drizzle ORM

RemindMe — Smart Discord Reminder Bot

remind.armandev.space | github.com/kaihere14/remindme

- Natural language reminder creation with recurring reminders, Discord DM + email notifications, Google Calendar sync, and timezone handling
- AI-powered intent parsing and smart scheduling
- Tech: Node.js, Discord.js, MongoDB, Express, Google Calendar API

BreathClean — Air Quality Monitor

Complexity Rank: #3 | [3-tier monorepo architecture, multi-language stack](#)

- Air quality monitoring and reporting application with a 3-tier monorepo architecture
- Notable for multi-language stack and structured monorepo approach

HireAI — AI Hiring Pipeline (Hackathon)

[HackFest 2025 submission](#) | [Built in 24 hours](#)

- B2B SaaS AI hiring pipeline with voice-based candidate screening
- Tech: Web Speech API, Claude API (Anthropic), MongoDB, JWT, Resend

Silent Guardian — Personal Safety App (Hackathon)

[Hackathon project](#)

- Voice-activated personal safety web app with GPS tracking, shake detection, and fake call overlay for emergency situations
- Tech: Web Speech API, GPS API, JavaScript

TECH STACK & SKILLS

Languages: JavaScript, TypeScript, Python, Java, C, C++, Rust

Frontend: React.js, Next.js, Tailwind CSS, HTML/CSS, Framer Motion, GSAP, Web Design

Backend: Node.js, Express.js, Bun, REST APIs, WebSockets, BullMQ

Auth / Security: JWT (access + refresh tokens), OAuth 2.0, OIDC, RSA key pairs, JWKS, HMAC-SHA256, AES-256-GCM, Role-based access control

Databases: MongoDB, PostgreSQL, Redis, Cloudflare R2

ORM / ODM: Mongoose, Prisma, Drizzle ORM

DevOps / Infra: Docker, Nginx, VPS deployment, Vercel, Linux, Git, GitHub, Postman

AI / ML: Google Gemini API, Groq AI (LLaMA), Claude API (Anthropic), OpenAI API, LangChain.js (learning)

APIs / Services: Google Sheets API, Google Calendar API, Discord.js, Resend, GitHub OAuth, Cloudflare R2, Payment Gateways

Architectures: MVC, Monorepo (3-tier), Microservices, Chunked uploads, Webhook pipelines, Async job queues

Web3 / Protocol: Nostr protocol, Bitcoin/Lightning stack, MCP (Model Context Protocol), Kind 30402 events

Currently Learning: RAG pipelines, Vector databases (Qdrant Cloud), LangChain.js, Semantic search, Embeddings (OpenAI/Gemini)

CERTIFICATIONS & ACHIEVEMENTS

Oracle Cloud Infrastructure 2025 — Generative AI Professional

Oracle Cloud Infrastructure 2025 — AI Foundations Associate

HackFest 2025 — Top 18 Global Finalist

GDG Cloud New Delhi x Agora | 24-hour Hackathon

- Ranked #18 out of 300+ global teams — Top 6 percentile
- One of 21 teams selected for the final evaluation phase
- Engineered and pitched a technical MVP in 24 hours
- Credential ID: CERT-4CB901B3-F587-4535 | Verify: creadefy.com/verify/CERT-4CB901B3-F587-4535

OPEN SOURCE CONTRIBUTIONS — SHOPSTR / NOSTR

- Shopstr is a decentralized Nostr-based marketplace for digital goods built on the Bitcoin/Lightning network
- 7 merged PRs into Shopstr codebase
 - Notable: Fisher-Yates shuffle fix for fair randomization
 - Notable: multi-file loading spinner bug trace and fix
- Diagnosed a coupling problem in the Shopstr codebase — documented with architectural diagrams (Excalidraw / Eraser AI)
- SoB 2026 proposal submitted April 23rd — rated 7.5/10 internally
 - Strong: technical core, MCP tool definitions, architecture diagrams
 - Weaker areas: 'Why Shopstr?' section, edge case handling, closing line
- Selection criteria: 50% proposal, 25% community engagement, 25% merged PRs
- SoB competency test: Node.js script to fetch/parse Nostr kind 30402 events from public relays using Shopstr's internal utilities
- MCP tool definitions designed: listListings(), getProduct(), getSeller()
- Key people: calvadev (project owner), Gautam (mentor, former SoB contributor)

COMMUNITY & ONLINE PRESENCE

- Portfolio: armandev.space — features guestbook, Spotify last played widget, GitHub activity heatmap
- Featured on YouTube (portfolio showcase video)
- GitHub: github.com/kaihere14 — 2,217 contributions in 2025, 1,958+ commits
- Twitter/X: @armankiyotaka
- LinkedIn: linkedin.com/in/arman-thakur-303b47367
- Instagram: @_mirenox
- Pinterest: pinterest.com/armanthakur200814
- Email: armanthakur200814@gmail.com
- Uses raw HTML for GitHub profile README (preference for custom, non-template profiles)

WORKING STYLE & PERSONALITY

- Builder mindset — ships real products rather than tutorial projects
- Prefers complexity-based project ranking over GitHub stars or vanity metrics
- Communication style: casual, concise, direct — dislikes AI-sounding or overly formal content
- Pushes back on generic output — wants human-sounding, short responses
- Broad project interests: AI tooling, safety apps, auth systems, developer infrastructure, open-source protocols
- Interest in Vedic astrology for personal reflection
- Comfortable working across the full stack end-to-end
- Consistent Java experience for algorithmic/DS work (linked lists, LeetCode-style problems)

CURRENT STATUS (MAY 2026)

- Primary focus: Building and growing DaemonDoc (daemondoc.online)
- Learning: RAG pipelines, Qdrant Cloud vector DB, LangChain.js, OpenAI/Gemini embeddings
- Building: Personal portfolio chatbot with semantic search over personal data (RAG + memory layer)

- Open to: Bounty-based Shopstr contributions, freelance web development projects, technical collaborations
- Exams upcoming — short-term availability slightly limited
- SoB 2026 outcome pending — secondary shortlist, final decision at SoB org level

DOCUMENT CONTEXT NOTE

This document is intended as the primary data source for a personal RAG (Retrieval-Augmented Generation) pipeline powering a portfolio chatbot at armandev.space. It contains comprehensive, structured information about Arman Thakur compiled from: his live portfolio (armandev.space), his official resume (May 2026), and detailed project/contribution history. This document should be chunked by section for optimal semantic retrieval. Questions a visitor might ask include: What projects has Arman built? What is his tech stack? What is DaemonDoc? Has he contributed to open source? What is his educational background? How can I contact Arman? Is he available for freelance work?

Source: armandev.space portfolio + resume (May 2026) + project history. Generated for RAG pipeline use.
